

EcoLawn is committed to water conservation and protecting our natural environment.

Every 1,000 square feet of traditional lawn removed saves 20,000 gallons of water annually.

Synthetic grass eliminates the need to use lawn mowers or other polluting gardening equipment, as well as any toxic fertilizers or lawn pesticides.

We do not use crumb rubber for infill – our infill is a blend of organic, non-toxic materials.

We are excited to offer synthetic grass products made from recycled materials and end-of-life recycling service for grass installations.

## FAMILY FRIENDLY

Our products are 100% non-toxic, lead free and designed specifically for pets and children to safely use.

## WATER FREE

Reduce your water bill! On average, 60% of a homeowner's water usage is attributed to their landscape.

## REBATES

The State of California and most water municipalities offer rebates for lawn removal, and starting with the 2016 tax year, the State will be offering tax refunds.

## NO MOW

Synthetic grass requires no mowing, fertilizing, or aerating. Enjoy the very minimal maintenance needs of synthetic grass.

## LESS MESS

No more grass stains, muddy paw prints and dirt tracked inside from pets in the yard. Enjoy less allergies too!

Sporting

Hospitality

Our synthetic grass products come with a 15 year manufacturer's warranty, and an expected lifespan of over 20 years.

## MAINTENANCE

Minimal care and maintenance protects and extends the useful lifespan of the grass – clearing debris, using a rake or blower to clear leaves, and rinsing dirt or spills from the lawn. We recommend adding a layer of infill and a power brushing every three to five years based on pet use and foot traffic.

## DRAINAGE

Our grass products are made with a perforated nylon backing, allowing water to drain through the grass and rinse the blades and infill. Every installation is graded to ensure runoff is directed toward trees and planting areas, so water can percolate down and recharge the water table.

## VARIETY

We install a variety of high quality synthetic grasses including 100% USA-made products and products made with recycled materials.

## FADING & HEAT RESISTANCE

Our advanced synthetic grass products feature built-in U.V. inhibitors within the yarn and allow the grass blades to hold color, even in the most harsh and sunny conditions. For areas with direct sunlight, we offer a variety of heat resistant grasses.

## HOMEOWNER'S ASSOCIATION

In response to the drought in California, Assembly Bill 349 was passed in 2015, prohibiting homeowner's associations from barring homeowners from installing synthetic grass.
